

Extended FdSc

Welcome to UCAB

Congratulations and welcome to UCAB! We are looking forward to seeing you on campus in September to start your journey on your Extended degree. The first year of the Ext FdSc will provide you with the base knowledge to progress and be successful in your studies. Modules including Fundamentals of Biological Sciences and Introduction to Animal Health will allow you to develop the skills and knowledge you need to succeed. There will be opportunities to go on trips throughout the year which will expose you to a range of different professions and give you an idea of career options that may be open to you when you complete your studies. There is also the opportunity to go on a variety of study tours alongside your course to aid you in developing your skills further through applying the knowledge you have gained.

Things to look forward to

There are a lot of developments happening onsite at UCAB. A new heritage farm development on the Wildlife Park will see our paddock stock move up to a new home and some new species move in. A new Cyberscape building will contain a digital farm and be a hub for digital creativity. The AI learning space is currently being created for students to use as a place to study and collaborate with each other. HE spaces are being refurbished to create a more usable space for socialising and studying. It is an exciting time to be a student here.

I am looking forward to meeting you all in
September!

Lauren Emerson
