

Welcome to BSc Animal Management with Science!

We hope you have a great summer 2025. We just wanted to let you know some details of our course from September 2025. As well as the modules we offer as part of the course, there are also a lot of other things students can look forward to.

We are developing a range of national and international study tours designed to enhance the student experience. These will range from South Africa to closer to home with Zoo visits, enrichment experiences and guest speakers.

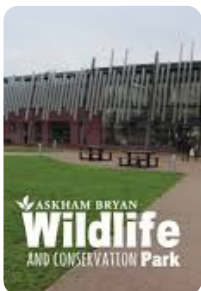

Research

Tutors and students have come up with interesting and innovative research projects for students to undertake on everything from public perceptions of animal treatment, to working with a nutrition company to make pet foods more palatable.

What would you like to research?

Wildlife Park expansion

Expansion has begun on our Wildlife Park with the Heritage Farm section beginning to take shape near the Animal Training Academy. The Heritage Farm will see the current paddock stock move up to their new home as well as the introduction of some new species!

This is not the only development on our Wildlife Park, 2025 will be an exciting time to be a student with us and see further developments.
