

BSC CONSERVATION AND ECOLOGY TOP UP!

Come September, we will all be back on campus to start the BSc Conservation and Ecology journey! If you are a past FdSc student, there will be some elements that seem similar, but we will be exploring them in greater detail. From Habitat Restoration to Environmental Impact Assessments, Conservation Research Projects to Community Outreach Programs, your BSc Conservation and Ecology journey will enable you to develop and refine skills essential for a career in conservation and ecological management.

Throughout the year, there will be various trips related to your modules, including both day trips and extended study tours to diverse ecological sites. Keep an eye out for the exciting opportunities available to all UCAB students.

As you progress in your BSc Conservation and Ecology studies, there will be the opportunity to survey some exciting sites, explore nature and to conduct some excellent research. With a variety of modules this course will open your eyes to the world of ecology and conservation and will allow you to gain a further understanding on how we can protect the environment for future generations!

I look forward to seeing and meeting you all in September during our Welcome Week.

Anna Pickard

Course Manager for BSc Conservation and Ecology (top up)
