ASKHAM BRYAN

What to Look Forwards to on your Equine Science and Management Degree...

Learning about practical aspects of riding and managing horses:

Tutor Fiona Harrison, MSc Sport coaching, BHS level 5 Performance Coach and BHS senior assessor, will be teaching coaching performance techniques including new research in this area and training for BHS assessments.

Tutor Kate Johnstone, MSc Equitation Science, BHSII and BHSSM and BE development coach, will be teaching a range of modern aspects of horse riding, training and care including equitation science (using learning theory to train your horse), modern aspects of tack and saddlery (including saddle fitting technology) and equine welfare.

Learning about equine science

Tutors Laura Baxter MSc and Lauren Emerson MRes in Animal Health and Welfare, will be teaching a wide range of science and nutrition based subjects including equine anatomy and physiology as well as advances in equine vet science. This will involve students taking part in practical lab work. They are also keen to teach students in the nutrition analysis lab, where students will be able to discover nutritional contents of equine diets.

Learning about running your own equine business

Many students use their degree to learn how to set up a successful equine business, to identify gaps in the market and to learn about marketing and running events. Tutor and equine business owner, Laura Johnson, BSc Equine Business and Event Management, will be showing students how to transform a business idea into a live, real business.

Extras that add up...

From assisting at events like the Askham Bryan Horse Trials and Bramham International Horse Trials (buggy driving, information desk assistants, arena party for Arena Eventing this year), to trips to Africa and training for and passing BHS exams, there's extras to add in if you want even more to do than your degree!
